Kadamb

Neolamarckia cadamba (Roxb.) Bosser

F-Rubiaceae

Distributed in Southern tropical evergreen, tropical moist deciduous, tropical fresh water swamp, and Western Ghats. Commonly known as kadam or Kadamba. Leaves are broad and dark green in colour. It has scented orange flower in dense globe-shaped in cluster. It is mostly grown for ornamental purposes. Fast growing species, wood is used for plywood and tea boxes. Propagated through seeds and air layering.
