Madake	<i>Phyllostachys bambusoides</i> Siebold & Zucc	F- Poaceae
<i>Phyllostachys bambusoides</i> is commonly known as Japanese timber bamboo, Madake and giant timber bamboo. Native to China and Japan. It can reach a height of roughly 20 m and a diameter 10cm. Leaves are dark green colour and sheath are strong and hairless. The flowering interval of this species is very long up to 120 years. This species is preferred for construction, furniture and art and crafts. Its sheath are hairless so it's used for wrapping food. Easily propagated through cuttings and seeds.
