Java Black Bamboo

Gigantochloa atrovioleacea

F- Poaceae

Gigantochloa atrovioleacea is commonly known as Java Black Bamboo or Tropical Black Bamboo. This mostly prefers to grow in dry regions, where black colour of its culms becomes more prominent with grey stripes. In our institute two types of black bamboo are available, one is *Gigantochloa atrovioleacea* and other one is *Bambusa vulgaris* black. Both culms look like similar but *Gigantochloa atrovioleacea* leaves are broader than *Bambusa vulgaris*. The maximum height up to 8-12 m and diameter up to 5-8 cm. The internode is 30-50 cm long and wall is 5-8mm. The nodes are whitish. The lower part of the culms develops arial roots
