Scientific	Bambusa bambos
Family	Poaceae
Remarks_	सुरक्षा और भारी नरिमाण (Security and heavy construction)
Latitude	23.3567
Longitude	85.2442
Plant_Orig	Native

Giant Thorny Bamboo	<i>Bambusa bambos</i> (L.) Voss	F- Poaceae
<i>Bambusa bambos</i> is commonly known as giant thorny bamboo, Indian thorny bamboo and <i>Bambusa spinosa</i>. Native to India, Sri Lanka, Bangladesh and Myanmar It is tall dark green colour with closely growing culms and large number of branches with thorn. Average height of this bamboo is 10-35m naturally found in dry zone forest area. Due to closed nodes this species is very strong like <i>Bambusa balcooa</i>. Only one problem is that during harvesting time labourers facing big problem due to culms are tangled with each other due to thorny and more branching character.
