Bamboo

***Thyrsostachys oliveri* Gamble**

F- Poaceae

Thyrsostachys oliveri is an attractive, evergreen bamboo. It grows up to 15-25 meter long 50-70 cm in diameter. Internode length is 40-60 cm. young shoots are edible. In Thailand seeds are also edible. This Bamboo is very attractive due to light green foliage. An excellent bamboo for construction purpose. Easily propagated through seeds and cuttings.
