Muli bansMelocana baccifera (Roxb.) kurzF- Poaceae

Melocana baccifera locally known as muli bans. It grows up to 10-25 m tall. Culms are greyish when young but becomes brown when mature. Young culms are covered with stiff, silver hair. The upper surface of the sheath is covered with white hair. Sheaths do not fall off, only blades fall off. Melocana baccifera flowers almost fully synchronically every 48 years. The seeds of this species are totally different from other species. The weight of single seed is approximately 50-150 gm. It is also known as running bamboo. It is Monopodial in nature. Easily propagated through seeds.
