Paradise tree	<i>Simarouba glauca</i> DC.	F- Simaroubaceae
Simarouba glauca is a medium size tree. Its bark is light grey colour with fissured bark. Its leaves are shinny and dark green in colour with comapound leaves with opposite arrangement. It is commonly known as Paradise tree, bitter wood, and laxmitaru. It bears creamy flower and elongated oval shaped fleshy fruits, initially green turns to purple to black when ripen. The wood is used for furniture, toys, and paper and pulp industries. Other use of this species is for manufacturing of lubricants, varnishes, medicinal soaps and detergents. It also checks soil erosion due to well developed root system.
