Bhalu Bans	<i>Bambusa balcooa</i> Roxb.	F- Poaceae
<i>Bambusa balcooa</i> is a clumping bamboo native from India sub-continent to Indo-China. It is very strong and large bamboo with thick walled. Growing up to 20-25 m and thickness of 6 inches. It is widely used for construction purposes due to strong character. This bamboo is plumping or sympodial in nature. Main branch is thicker than other and drastically reduce its girth from base to upper side, and lightly curved. Its branches are thorny, it is one of the strongest bamboos of India. Easily propagated through cutting and offset planting.
