Salai	<i>Boswellia serrata</i> Roxb, ex Colebr	F- Burseraceae
It is medium size moderately drought tolerant species. Bark is yellowish white with dark blotches papery and smooth flakes. Flowers are white to pale yellow with five to seven petals. Boswellia serrata is currently at risk because of non-sustainable practices. Leaves are compound leaflets are oblong with toothed margin. The gum extracted from trunk is called ‘Loban’ or ‘Guggal’ used in worship and medicinal purposes. One of the important medicinal tree of India used in Asthama, Diabetes, therapeutic and other purposes. Commonly found in Jharkhand Forest.
