Dhaura	Anogeissus latifolia (Roxb. ex. D.C.)	F- Combretaceae
<i>Anogeissus latifolia</i> is a small to medium-sized deciduous forestry species, with a narrow crown, commonly known as axel wood, Dhaura, etc. The bark is reddish brown in colour with simple leaves, flowers are light yellow to reddish in centre. The pods are developed in clusters with thorns. The germination percentage of seeds are very low. The tree is the source of Indian gum, known as ghatti gum. It also produces tassar silk, but not popular commercially.
