Khirni

***Manilkara hexandra* (Roxb.) Dubard**

F-Sapotaceae

Manilkara hexandra is a slow growing evergreen plant species. It grows up to 12- 24 m tall. It is native to much of the Indian subcontinent. It is locally known as Khirni. Its wood is hard and edible. Its seeds yield useful oil. It is used as a rootstock for *Manilkara zapota*. Easily propagated through cuttings.
