Wood apple

Limonia acidissima L.

F-Rutaceae

Large deciduous tree with dark brown ridged fissured bark. Branched end zigzag twigs are thorny. Leaves are dark green arranged alternately with minutely toothed. Flowers are yellowish green with red in clusters. Fruits round to oval shape, pulp is whitish to brown astringent, acid or sweetish. It is mostly known for its woody fruits, which are used for making chutney and consumed raw with jaggery. All parts of the tree used as a medicinal purpose. It is commonly known as Kathbel, Kaitha, Dadhiphal etc.
