Nirmali

***Strychnos potatorum* L.f.**

F- Loganiaceae

Strychnos potatorum is a medium size tree with light greyish bark. Leaves are dark green with prominent vein. Flowers are bisexual with white colour in short axillary cymes. Fruits are berry initially green turns black when ripe 1-2 cm in diameter. Seeds are globose in shape. Population is drastically depleting due to non-self-generative fruits. They are also destroyed due to fungal attack. It is not found in Jharkhand. It is native to India, Myanmar, Sri Lanka and Madagascar.
