Red Sandal

Pterocrpus santalinus Roxb.

F- Fabaceae

It is a medium size tree, deciduous, bark is brownish, deep clefts of rectangular plates. Its leaves are alternate, trifoliate with three leaflets. The Flower is yellow with five petals produce in short racemes. Its fruits are obliquely orbicular including wing, only one seed per pod. Red Sandal is one of the most important species due to its valuable heart wood. Cost may be varying from 3000-10000/kg. All part of the tree has medicinal value.
