Phansi (Button Tree)

***Anogeissus acuminata* (Roxb. ex. D.C.)**

F- Combretaceae

Anogeissus acuminata is huge sized deciduous forestry species , with narrow crown, commonly known as axlewood, Phansi, Pasi, Sehoong, Paunchinan and Parsia. Bark is dark brown with fissures cracks. Leaves are simple, flowers are light yellow and reddish in center. Pods developed in clusters and thorny seeds are just like chilly seeds. Germinal percentage of seeds are very low. So clonal propagation of this species is very important. Mostly found in river bank of Mahanadi in Odisha. Its wood has religious important because every year Chariot(Rath) of lord Jagannatha, lord Balarama and goddess Subhadra made from this species during Rath Yatra festival. Due to unsustainable harvesting of this species number of tree are drastically decreasing in natural forests. So, conservation of this species is very important.
