Khair	<i>Acacia catechu</i> (L.f.) P.J.H. Hurter and Mabb.	F- Fabaceae
<i>Acacia catechu</i> is a medium size deciduous thorny tree. It is commonly known as khair. Its bark is light with fissured cracks. Another name of this species is cutch tree, black cutch and black catechu. The leaves of this species are bipinnately compound. The flowers are pale yellow and sessile bloom in long solitary. The fruit of the <i>Acacia catechu</i> tree is a flat in brown colour having 3-8 seeds orbicular or ovate. All the parts of the plant are used in many things like medicine, food, fodder, pain, relief and extract of the plants are used in betel preparation and gum is used as a medicine. The katha is obtained by heartwood of <i>acacia catechu</i> commonly known as khair. it is mostly propagated through seeds . Uttar Pradesh, Bihar and Rajasthan are famous for katha production.
