Indian Snowberry

Flueggea leucopyrus Willd.

F-Phyllanthaceae

Flueggea leucopyrus is a medium size shrub or tree. It is commonly known as Indian snowberry, white honey or bush weed. It is multiple branching shrub growing up to 5 meters. With angular branchlets ending into sharp spines. The bark is reddish in colour. The leaves are alternate obovate to elliptic. The flower are greenish-yellow colour. The fruits are globose like thermacoll ball turned white when ripe. The seeds are trigonous in brown colour. The bark, leaves and fruits are used as a medicine. It is also used as a fodder.
