Plant_Orig	Native

Ceylon Teak

Cassine glauca (Rohb.) Kuntze

F- Bignoniaceae

Cassine glauca is medium sized deciduous and semi-evergreen forestry species. Distributed in India, Sri Lanka, Philippines, Thailand, etc. Bark is dark grey colour with black patches. Leaves are opposite or subopposite, ovate, elliptic, or oblong, oval with oval with dated margin. Fruits are ovoid and one seeded developed in clusters on tips of the branches. The leaves and fruits are used to treat cough, cold and swelling. The wood of this species is used for making furniture and agricultural implements. *Cassine glauca* is a favourite species for Boogie Woogie Aphids (Dancing Aphids).
