Caesalpinia pulcherrima (L.) Sw.

F- Fabaceae

Caesalpinia pulcherrima is semi- evergreen shrub with dark grey bark distinct ridges and many prickles. Leaves are bipinnately compound and alternate. Leaflets are oblong in shape oblique base and rounded apex. The flowers are born in racemes with five orange, red and yellow petals. Fruits are dark brown in colour when matured 2-3 seeds in a single pod Widely planted for live fencing, ornamental and use as a nitrogen fixing tree. Flowers are blooming in the month of March – June. Commonly known as peacock flower. Mostly red and yellow flower are found in India.
