Indian Blackberry

***Syzigium cumini* (L.) Skeels.**

F-Myrtaceae

Syzigium cumini is a large sized evergreen tree having flashy greyish bark. Native to tropical Asia and Australia. Leaves are shiny, tender leaves are red/purple in colour turns light green when matured. Flowers are cream blooming in cluster. Fruits are different in size, round to oblong, initially light green then pink when full ripe dark purple or black in colour with a single seed. The fruits and seeds are considered to control sugar level, and disease of teeth and gum. The bark is used for tanning and wood is used to making boat and ship due to water resistance properties.
