Lagestroemia speciosa L.

F-Lythraceae

Jarul is a medium-sized deciduous tree widely grown for ornamental purposes. The purple to pink flowers grow in branching cluster and wavy, spoon-shaped six (6) petals are found in one flower. Stamen is light yellow in colour. Recently used as a host plant for Tasar Silk production. Fruits are capsule shape with winged seeds dispersed whern matured. Wood is used for making plants, boats, water tank and construction. The purple to pink flowers grow in branching cluster and wavy, spoon-shaped six (6) petals are found in one flower.
