Gamhar

***Gmelina arborea* Roxb.**

F-Lamiaceae

Medium size fast growing deciduous tree species with whitish grey, smooth and lenticulate bark. Locally known as Gamhar. Leaves are light green in colour, upper side and whitish in lower side, heart shaped with entire margin. Fruits are oval shape initially green turned yellow when ripe. Leaves good for fodder, fruits are edible, oil is obtained from seed. widely planted for its wood used for manufacturing furniture, plywood, doors, windows, paper industries etc.
