African Wattle

Peltophorum africanum Sond.

F-Fabaceae

The Weeping wattle is a semi deciduous flowering tree. It is native to Africa, their bright yellow flowers bloom on the tip of the branch. Pods are pointed and copper colour with two or three seeds in a single pods, due to copper colour of the pods it is also known as copper pod tree. Mostly grown as an avenue tree for road side plantation. Locally known as Radhachura. One of the important avenue trees for road side plantation.
