Banyan

Ficus benghalensis L.

F-Moraceae

Ficus benghalensis is commonly known as the banyan tree. It is native to Indian subcontinent. A huge evergreen tree, with descanting aerial root and becomes trunk line and supportive . Young leaves are pink in colour and turns dark green after maturity. Fruits are spherical grow in pair from leaf axil light green in starting the become red when ripe. The fruit is eaten by bird and passed through the digestive system of birds which help to germinate seeds earlier. The leaves are liked by elephants and camels. Married women worship under this tree on the festival of Batt Savitri for longer life of husband. and wrap the trunk with colourful raw thread. The oldest banyan tree is located in Botanical Survey of India campus.
