| <p><i>Adansonia digitata</i> the Baobab tree native to the African continent and Southern Arabian Peninsula. They are typically found in dry, hot Savannas and of Sub-Saharan Africa. They grow from 5-25 metres. (16-82 feet) tall. Leaflets 5-7 sometimes 9. The trunk is typically very broad and flatted or cylindrical, often with a buttressed trunk. Trunk may reach a diameter of 10—14 mts. (33-46ft.): Losing their leaves in the dry season and remains leafless for about eight month of the year. Baobab tree stores water in their trunks and branches on a seasonal basis. The water is absorbed into vascular tissue of the tree where it can be more into trees Parenchyma cells for long term storage. A large baobab can store as much as 136400 liters of water.</p> |                                     |                    |
