Celon Oak

Schleichera oleosa (Lour.) Oken

F- Sapotaceae

Large deciduous tree with short fluted trunk and shade spreading crown. Brown smooth bark has feather compounded leaves with three pairs of stalkless green colour leaflet which are bright scarlet when young and turn dark green then turn yellow before fall. The flowers are tiny and occurring in short dense yellow cluster. The green colour fruits are plum shaped with pointed tips. Edible with one or two seeds. It is one of the important lac host plants. It is widely planted of ornamental because tender leaves are colourful at different stages. In Jharkhand it is one of the livelihoods supported species for cultivation of superior lac on the tree.
