Cluster fig

Ficus racemosa L.

F-Moraceae

The Cluster fig is a large size semi deciduous tree belongs to Moraceae family. It is native to Australia and tropical Asia. The upper portion of the leaves are dark green and lower are light. The fruits are grown on main trunk and primary branches. The figs are initially light green in colour turns red to black when ripe. The leaves are important fodder. The fruits are eaten by birds, rodents, monkeys etc. It’s also eaten by rural peoples.
