Jackfruit

Artocarpus hetrophyllus Lam.

F- Moraceae

Medium size evergreen tree with light grey bark. The leaves are dark green colour in upper side and light brown in lower side, rounded in the apex. White individual flower born on the main trunk and main branches. Jackfruit is the largest tree fruit up to 40-50 Kg. Bark of jackfruit is spiky dark green initially turned yellowish when ripe. Mostly cultivated for its fruits. Fruits are used for making vegetable, pickles, chips when raw, Koa are eaten after ripen fruits. Muttom varikka, Sindoor, Shankara, Dang Rasimi, and Siddu Jackfruit are predominating varieties of jackfruits. Both ripe and unripe fruits are consumed. The ripen fruit is sweet and commonly used in dessert. Green jackfruit has a mild taste and meat like texture. So, it’s called vegetable meat. In West Bengal it’s called “Gacher Patha”. In South India Jackfruit chips are very popular. Seeds of ripe fruit are also edible after cooked.
