Tree of heaven

Alanthus excelsa Roxb.

F-Simaroubacea

Alanthus excelsa is commonly known as tree of heaven. It is deciduous in nature and mostly found in India and Sri Lanka. The bark is light grey and the leaves are compound with dented margins. Its leaves have a disagreeable odour. Its flowers are pale cream blooming in clusters. Its pods are flat containing 2-3 seed. All parts of the plants used as a medicine. Its wood is used for light furniture, matchstick industry and or as fodder. It is fast growing species planted for the control of air pollution and soil erosion.
