White Siris

***Albizia procera* (Roxb.) Benth**

F-Mimosaceae

Albizia procera commonly known as white siris. It is medium sized deciduous tree with yellow creamy bark. The leaves are bi-pinnate wit 2-5 pair of sub-opposite pinnate. Greenish –Yellow flowers with long threadlike white stamens. Reddish brown to copper colour flattened pods contains 6-12 seeds. Leaves are good fodder, woods are used for furniture, charcoal, and resin. Bark is used to make fish poison.
