Mango

Mangifera indica L.

F- Anacardiaceae

Mangifera indica is one of the important fruits of the world. It is king of all fruits. Bark is dark brown with cracks / rough. The leaves are initially red colour and then dark green when mature. Leaves are grown in clusters at the tips of the branches. The flower is produced in terminal panicles in cream to light pink colour. The fruit may be oval, round, and other shapes. Fruit has single hairy seeds. The colour of the mango depends on varieties. Several varieties cultivated in India are Malda, Langra, Alphonso, Amrapali, Dusheri, Chausa, Jardalu, Krishna bhog, Sipia, wild mangoes are also available in Jharkhand. It is eaten raw or used to make jam, jelly, sauce, chutney, pickle, juice , amavat, aampanna, murraba, ice cream etc.
