Fishtail/Jaggery palm

Caryota urens L.

F-Arecaceae

They are often known as fishtail palm because of the shape of their leaves. The flowers of which are used to make one type of jaggery and to make palm wine. Male and female flowers grow separately on the same alternative horsetail tassels. Fruits are spherical in shape initially green turn black when ripe. Leaves are a good source of fiber. Wood is used for making rafts, panels and agriculture implements.
