Muyna (Katai Saag)

Vanguria spinosa Roxb.

F-Rutaceae

Muyna is a large common shrub. Ovate-oblong leaves are arranged oppositely or whorls of three. Strong spines are bent at an acute angle. Flower cymes occur in leaf axils, fascicled on a short peduncle, Flowers are small, greenish-white. The stigma is 4-5-lobed. Fruit is of the size of a cherry, turbinate, smooth, yellow when ripe, succulent. Flowering: March-April. It is mostly used instead of pulse in traditional uses by some tribal communities. Fresh and dry leaves are used by tribals in many dishes.
