Wild Almond

Sterculia foetida L.

F-Sterculiaceae

Sterculia foetida is commonly known as wild almond. Large deciduous tree with flasky grey-brown bark. The leaves are long stalks, placed at the end of the branches are palmately compound. Bell shaped red flowers are emerging in the month of March-April. Boot shaped woody fruits initially green in colour turned dark red when ripped containing 10-15 seeds. Seeds are edible. Widely planted for the ornamental purpose.
