Indian Jujube

Zizyphus mauritiana Lam.

F-Rhamnaceae

Zizyphus mauritiana is also known as Indian jujube, Chinese apple and Ber. Small size spiny deciduous tree with black reddish vertical furrows bark. Glossy green oval leaves are white in lower side. Star shape white greenish flowers appear on base of the leaves. The fruit is variable shape and size like oval, obovate, oblong, or round it depending on the varieties. The fruits are initially green in colour turn reddish brown on ripening. Fruits are widely use after ripening and make different types of items like pickles, powder for making candy. The fruit is eaten raw. It is rich source of vitamin C. This is one of the important livelihood support species for rural peoples.
